

BudgetAtlas

English User Guide

Version 1.0 · 28 August 2026

LOCAL BUDGET APP

BudgetAtlas is a local, responsive Progressive Web App for managing monthly income and expenses. It provides a focused overview, quick entry, charts, and local import/export tools.

This guide describes the current interface, visible buttons, and key workflows.

DARK THEME

The dark overview with monthly buffer, Expense Mix, Quick access, income, and expenses.

LIGHT THEME

The same budget information in the light design - comparison only.

THEME COMPARISON

The light screenshot is used only to compare light and dark themes. All feature descriptions in this guide use the dark interface.

LOCAL

Budget data stays in the browser.

OFFLINE

Usable offline as a PWA.

LANGUAGE

German and English can be switched.

APPEARANCE

Dark and light themes.

01 · Navigation and getting started

DESKTOP SIDEBAR

The sidebar links to Overview, Income, Expenses, and Expense Mix. Import / Export is at the bottom.

MONTH HEADER

The month header shows the menu, current month, and language switch.

HOW IT WORKS

- On desktop, the left sidebar opens the four main areas.
- On mobile, the bottom navigation links to Overview, Income, Expenses, and More.
- The top-left menu button opens or closes the sidebar.

Selecting an item scrolls to the corresponding section on the current page.

BOTTOM NAVIGATION

The mobile bottom navigation provides four equal entry points.

FIRST STEP

Add income and expenses first. BudgetAtlas then updates the buffer, monthly totals, and expense shares automatically.

02 · Dashboard and monthly overview

DARK DASHBOARD

The dark overview with the key monthly information.

DASHBOARD FEATURES

- The monthly buffer is income minus monthly expenses.
- The buffer card signals positive or negative results by color.
- Expense Mix shows the distribution of monthly expenses as a donut chart with legend.
- The summary cards show Income / Month and Expenses / Month.
- The expense ratio compares monthly expenses with income.

This page deliberately uses only the dark design. The light screenshot appears only on page one for theme comparison.

MONTHLY BUFFER

Income minus monthly expenses. Green means available buffer; red means a negative result.

EXPENSE MIX

The donut chart and legend show the distribution of monthly expenses.

SUMMARY CARDS

Income / Month and Expenses / Month show the two key totals.

EXPENSE RATIO

Compares monthly expenses with income.

03 · Income, expenses, and Quick access

QUICK ACCESS

Quick access provides direct actions for income, expense, and Import / Export.

EXPENSE LIST

Expenses				
	Miete	1.100,00 €		
	Strom & Gas	85,00 €		
	Internet	40,00 €		
	Lebensmittel	380,00 €		
	Versicherungen	140,00 €		
	Fitnessstudio	35,00 €		
	Streaming	22,00 €		
	Auto (Sprit)	120,00 €		
	Kfz-Versicherung	220,00 €		
	Quarterly			
	Urlaub	1.200,00 €		
	Yearly			
	Kleidung	150,00 €		
	Every 2 months			
	Arzt / Apotheke	50,00 €		
	Variable			
	Restaurantbesuche	90,00 €		
	Handy	15,00 €		
+ Add expense				
Total / Month		2.325,33 €		

Data stored locally · Works offline · v1.8

Dark expense list with categories, amounts, frequency notes, and edit/delete icons.

DARK REFERENCE

The list and descriptions on this page are based on the dark screenshot.

MANAGE ENTRIES

- + Add expense opens the form for icon, name, amount, and frequency.
- + Add income works the same way for income items.
- The pencil icon edits an existing row inline.
- × deletes the row. An undo action is available briefly afterwards.
- The section title or chevron collapses and expands income or expense.

FREQUENCIES

Supported frequencies are Monthly, Every 2 months, Quarterly, Yearly, and Variable. For non-monthly expenses, the payment amount remains visible while the overview uses the monthly budget equivalent.

04 · More menu and Import / Export

MORE MENU

The More menu groups Expense Mix, Import / Export, Language, and Appearance.

EXPENSE MIX Opens the visual spending distribution.	IMPORT / EXPORT Opens the data tools.
LANGUAGE Switches between German and English.	APPEARANCE Switches between dark and light theme.

DATA ACTIONS

IMPORT EXCEL Reads .xlsx or .xls files and shows a preview before applying them.	EXPORT EXCEL Creates a workbook with income, expenses, monthly values, and shares.
EXPORT PDF Opens a printable monthly overview.	EXPORT IMAGE Exports the dashboard area as a PNG image.
EXPORT JSON BACKUP Backs up budget data and app settings as JSON.	RESTORE JSON BACKUP Previews the content and can then replace local data.

IMPORT / EXPORT

The dark Import / Export menu contains the six available data actions.

05 · Importing and restoring safely

EXCEL IMPORT

- Open Import / Export and choose Import Excel.
- Select an .xlsx or .xls file.
- BudgetAtlas detects income and expenses and shows the record count.
- Invalid rows are identified with line number and reason and are skipped.
- Apply the import only after reviewing the preview.

JSON RESTORE

- Choose Restore JSON backup and select a BudgetAtlas JSON file.
- The preview shows income, expenses, and included settings.
- Restore replaces the current local budget data.
- Cancel leaves the existing data unchanged.

IMPORTANT

Restoring JSON replaces the current data. Export a current JSON backup first if you want a rollback point.

DEMO WORKBOOK

docs/demo.xlsx contains fictional sample data only and can be used to test Excel import.

CHOOSE THE FORMAT

Use Excel for tables, PDF for a report, PNG for the dashboard view, and JSON for a complete backup.

06 · Local storage, offline use, and privacy

STORED LOCALLY

- Budget data is stored exclusively in the browser's localStorage.
- There is no backend, user account, or tracking.
- Personal financial data is not stored server-side.
- JSON backups contain budget data and selected app settings.

PWA AND OFFLINE

- A Service Worker caches the static PWA for offline use.
- The app can be installed on mobile devices or desktop.
- The interface respects prefers-reduced-motion.
- An update notice can be signaled through version.json.

IMPORTANT LIMITS

NO ACCOUNTS

No sign-in and no user accounts.

NO SERVER BUDGET

No server-side budget storage.

NO TRACKING

The project documentation describes no tracking.

NO INVENTED MODULES

No features such as receipt scanner, accounts, goals, or artificial budgets.

07 · Typical workflows

1 • SET UP A MONTH

Add income, then add expenses with the correct frequency. Check the monthly buffer and Expense Mix.

2 • QUICK ENTRY

Use Quick access, then choose Income or Expense. The overview updates totals after saving.

3 • REVIEW

Open Expense Mix for distribution and collapse or expand income and expense sections as needed.

4 • EXPORT

Use PDF for a report, PNG for the view, Excel for tables, and JSON for a complete backup.

IF SOMETHING LOOKS WRONG

- For non-monthly expenses, check the frequency: payment amount and monthly share differ.
- After an import, review the preview and invalid rows.
- Restore a JSON backup when needed.

COLOR LOGIC

Green = positive or income-related values. Orange = expenses or emphasis. Cyan = navigation and actions. Red = negative buffer or replacement warning.

08 • Reference, version, and links

PROJECT STATE

Project: BudgetAtlas

Version: v1.0

Status: public standalone repository

Technology: pure HTML, CSS, and JavaScript; no framework, package manager, or build step

License: GPL-3.0

BASIS

This guide is based on the public repository documentation and the current main branch, checked on 28 August 2026, plus the supplied screenshots.

The light screenshot is used only as a theme comparison. Feature chapters use dark screenshots.
